

CARL-ABUBAKAR EL-AMIN IGBAFE

Ifako Ijaiye, Lagos State | 08072552365 | elamincarlabubakar@gmail.com

PROFESSIONAL SUMMARY

Computer Science graduate with a Second Class Upper (4.41 CGPA) and a strong focus on backend development, machine learning, and data-driven problem solving. Experienced in designing algorithmic solutions, developing predictive systems, conducting technical research, and building practical applications with Python and Django. Comfortable working across supervised, unsupervised, semi-supervised, and reinforcement learning paradigms, with a strong interest in turning complex computational problems into efficient, practical solutions.

TECHNICAL SKILLS

Programming & Frameworks: Python, Django, Streamlit, SQL, HTML, CSS, JavaScript. **Machine Learning & Data Science:** Supervised Learning, Unsupervised Learning, Semi-supervised Learning, Reinforcement Learning. **Core Competencies:** Data Analysis, Network Anomaly Tracking, Local Algorithmic Execution, Record-Keeping.

EDUCATION

Bachelor of Science in Computer Science | Federal University Oye-Ekiti (FUOYE). Graduated: 2026 | Class of Degree: Second Class Upper (4.41 CGPA). **Senior School Certificate Examination (SSCE) | Grano Model College.** Completed: 2018.

PROFESSIONAL EXPERIENCE

Machine Learning Internship | Mark Egbeton Nigerian Limited (2025): Developed and evaluated machine-learning pipelines and predictive models during an industrial training placement. Conducted comparative algorithmic research involving tree-based ensemble learning methods and deep-learning architectures for sequence-classification tasks. Supported model evaluation and data-driven experimentation to assess approaches for classification problems.

Network Engineering & Web Development Internship | Lagos Television (LTV) (2025): Contributed to network engineering and web-development activities, including network troubleshooting, technical support, system integration, and backend web-development tasks using Python and Django. Assisted with maintaining network and system functionality while applying software-development principles to support functional and maintainable web applications.

Writer | Pegasus Reporters: Produced and edited written content for publication, with emphasis on clear communication, accurate information presentation, research, and timely delivery of articles.

NIMC Registration Agent | MTN Paycheck | Ifako Ijaiye & Agege, Lagos (January 2020 – December 2022): Processed and captured demographic and biometric information for National Identity Management Commission (NIMC) registrations with emphasis on accuracy and data integrity. Guided applicants through registration procedures and resolved data-related inquiries. Maintained accurate records while handling sensitive registration information in accordance with operational procedures.

Teacher | New Glory | Ifako Ijaiye, Lagos (September 2018 – August 2020): Facilitated classroom learning and student engagement through structured instructional methods. Managed classroom activities, monitored student progress, and provided individualized academic support. Communicated concepts clearly to learners with varying levels of understanding.

PROJECTS & RESEARCH

Phishing & Network Anomaly Detection System: Developed an automated classification pipeline using the PhiUSIIL Phishing URL Dataset and datasets sourced from the UCI Machine Learning Repository to identify malicious links and track network intrusions.

LLM Conversational Assistant: Fine-tuned a Mistral-7B-v0.1 model using QLoRA for a text-only conversational pipeline, with emphasis on local algorithmic execution and without remote deployment components.

Performance Evaluation of Ensemble and Deep Learning architectures for Prediction of Drug-Induced

Autoimmunity: Conducted research evaluating ensemble and deep learning architectures for predicting drug-induced autoimmunity, focusing on model performance and comparative evaluation.

News Classifier: Developed a news-classification model using a Convolutional Neural Network (CNN) approach.

RESEARCH & TECHNICAL INTERESTS

Backend software engineering; machine learning and predictive modeling; network anomaly detection; natural language processing and LLM fine-tuning; data analysis; algorithmic research; and locally executed computational systems.
